§ 108.175

- (e) A semi-enclosed derrick to the extent of its enclosure above the drill floor or to a height of 3 m (10 ft.) above the drill floor, whichever is greater.
- (f) Except as provided in §108.175 an enclosed space that has an opening into a Class I, Division 2 location.

§ 108.175 Contiguous locations.

An enclosed space that has direct access to a Division 1 or Division 2 location is the same division as that location, except—

- (a) An enclosed space that has direct access to a Division 1 location is not a hazardous location if—
- (1) The access has self-closing gastight doors that form an air lock;
- (2) The ventilation causes greater pressure in the space than in the Division 1 location; and
- (3) Loss of ventilation overpressure activates an alarm at a manned station:
- (b) An enclosed space that has direct access to a Division 1 location can be considered as a Division 2 location if—
- (1) The access has a self-closing, gastight door that opens into the space and that has no hold-back device;
- (2) Ventilation causes the air to flow with the door open from the space into the Division 1 location; and
- (3) Loss of ventilation activates an alarm at a manned control station; and
- (c) An enclosed space that has direct access to a Division 2 location is not a hazardous location if—
- (1) The access has a self-closing, gastight door that opens into the space and that has no hold-back device;
- (2) Ventilation causes the air to flow with the door open from the space into the Division 2 location; and
- (3) Loss of ventilation activates an alarm at a manned control station.

§ 108.177 Electrical equipment in classified locations.

Electrical equipment and devices installed in spaces made non-hazardous by the methods indicated in §108.175 must only be essential equipment.

Vantilation for and

§ 108.181 Ventilation for enclosed spaces.

VENTILATION

- (a) Each enclosed space must be vented or ventilated.
- (b) There must be a means to close each vent or ventilating system.
- (c) Each fan in a ventilating system must have remote controls installed in accordance with part 111, subpart 111.103, of this chapter.
- (d) There must be a means to close each doorway, ventilator, and annular space around each funnel or other opening to machinery, stowage, or working spaces. The means must be located outside the space.
- (e) Each intake in a ventilating system must be located so as to prevent, as far as practicable, the intake of noxious fumes.

§ 108.185 Ventilation for enclosed classified locations.

- (a) The ventilation system for each enclosed classified location must be designed to maintain a pressure differential between the enclosed classified location and each non-classified location adjacent to the enclosed classified location, so as to prevent the discharge of ignitable gases into the non-classified adjacent locations.
- (b) Each air intake must be outside of enclosed classified locations.
- (c) Each unit must have alarms that are powered independently of the ventilation motor power and control circuitry and sound at a continuously manned station when—
- (1) Gas is present in an enclosed classified location; or
- (2) The ventilation system for the space is not working.
- (d) Each ventilation system for enclosed classified locations must provide a complete change of air every five
